

*Whilst there are consultancies that provide stormwater advice in conjunction with their building and road design, and there are civil contractors who can install stormwater solutions, stormwater is not their major focus.*

**AT OPTIMAL STORMWATER, WE SPECIALISE,  
STORMWATER IS OUR BUSINESS.**

# CAPABILITY STATEMENT

**Optimal Stormwater has the following Capabilities and Objectives:**

- Stormwater Treatment Design
- Stormwater Harvesting Design
- Stormwater Treatment Design and Construct
- Stormwater Harvesting Design and Construct
- Stormwater Gross Pollutant Trap Auditing
- Stormwater Device Rectification Works
- Stormwater Operation and Maintenance Manuals
- Training and Education in Stormwater Management
- Policy and Strategy Review for Stormwater
- Stormwater Management Plans
- Peer Review of other's Stormwater Designs

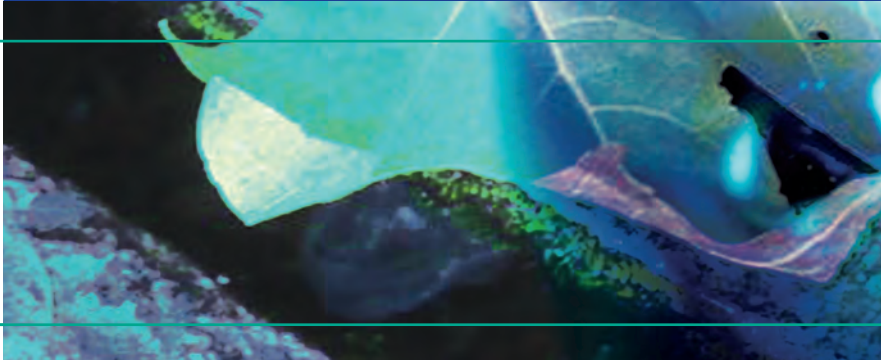

*optimal stormwater*

*optimal stormwater*

**Staff at Optimal Stormwater have a long history in stormwater treatment and are leaders in stormwater harvesting. They have been involved with the technical development of several of the proprietary GPT's and have exhaustive understanding of the strengths and weaknesses of all GPT's on offer. Optimal Stormwater staff are experts in sizing, siting and selection of all types of GPT's, particularly CDS units.**

For a more detailed look at the company, its capabilities, case studies, photos, videos, etc, check us out at:

[www.optimalstormwater.com.au](http://www.optimalstormwater.com.au)

**T**he extensive knowledge of Optimal Stormwater staff, means we have decades of experience in hydraulic design for functionality as well as bypass capacity. Our experience with the maintenance of all kinds of stormwater treatment solutions, means our advice is not only practical, it can commonly reduce overall long term costs.

Optimal Stormwater was formed late 2009, but with Murray Powell as their General Manager, and the corporate backing of Henry & Hymas Engineers, the company was quickly off the mark, and is rapidly developing a reputation for quality of information, engineering and excellent service.

It is also the only company in the niche market of GPT auditing. So if you would like to locate and identify all your GPT's, plus their make, model, storage volume, monitoring requirements, cleaning expectations, get a Data Sheet plus O&M procedure for every trap, we can do that for you.

Auditing is a critical element of the asset management of your devices, it's essential for budgeting, and several councils have already engaged Optimal Stormwater for this task.

Optimal Stormwater staff have been involved in some very interesting stormwater harvesting projects in the last 5 years, as well as providing training to councils on all the elements that go into making a stormwater harvesting project successful. Talk with people that specialise in this field about your next project. Talk to Optimal Stormwater.

Given that for every stormwater project, there are limitations in budget, site constraints and hydraulic constraints, the perfect answer is rarely possible, and it is the job of the experienced stormwater engineer to find the "optimal" stormwater solution. Hence our company name and corporate objective....., to find every client the optimal answers to their stormwater problems.

We are not trying to be "Jack of all trades" we are focused at being "masters of one". Optimal Stormwater are your one stop shop for stormwater expertise.
